

# Which 5 companies have the highest revenue in the Energy Sector?

Top 5 Companies in the Energy sector by revenue  
from 2012 to 2015

Companies Ticker and revenue per year

Here is a histogram of the top 5 companies in the energy sector. In 4 of the 5 individual charts, the data is right-skewed (The median is lower than the mean) but the last one is slightly symmetrical.

In the Top 5 companies, there was a decrease between 26% and 34% in revenue from the 3rd to 4th year.

The mean revenue was \$188,278M with a standard deviation of \$115,049M. The SD is coming lower over the years, this means that the numbers are getting more consistent.

The XOM revenue range is higher than MBM, suggesting that XOM revenue is more volatile than MBM.

By comparing the median from one year to the next, we see that it is decreasing and this is further proof that revenue is decreasing.

As the graph shows, the revenue tends to come down. This indicates that the energy sector (oil and gas based) is in decline, making it an unattractive investment sector.
